

CARAWEB

How to connect an iPhone, iPod or iPad to the Caraweb Network

- 📶 In **Settings > Wi-Fi Networks** menu on your device, choose **Caraweb - xxxxxxxx**.
- 📶 When the device has associated with the Caraweb SSID you may be asked to enter a password. Use **hotspotlogon**, then click ok.
- 📶 In **Settings > Safari > AutoFill**, turn on **Names & Passwords**. This will remember your username and password so you won't have to re-enter it again.
- 📶 Return to the main screen and enter the Safari browser (or any other internet browser). Try to visit any website and you'll be redirected to the Caraweb landing page. Enter your **Username** and **Password** and tap **OK**.
- 📶 Open a new page and you're ready to surf the net.
- 📶 If nothing happens and the Wifi signal shows on top of your screen you may have to close all open pages and start a fresh browser page.
- 📶 If this still fails, open **Settings > Wi-Fi Networks** and tap the **Caraweb - xxxxxxxx** network then tap **Forget Network** and reboot your device. This will refresh your device to allow it to connect to a network again using a different IP address.
- 📶 When you have restarted your device, follow the instructions again and you will be able to logon.
- 📶 ***IMPORTANT*** When you have finished browsing return to the Caraweb landing page and tap **Logoff**. This will stop your device accessing Wifi data in the background using your limited data usage.
- 📶 For any more help speak to the campsite manager.
